## ABOUT US

NRB Consult LLC is a company incorporated with the requirements of Qatari law. We are incredibly proud to state that within a short timeframe, we have significantly grown as one of the reputed provider of cost-effective and comprehensive solution to construction contract management problems in the State of Qatar. Our international expertise and highly-skilled team of dedicated staff having accumulated unparalleled experience of providing contracts & claims management, dispute resolution and project management services over the past 30 years are REGIONAL SPECIALISTS within the unique and challenging environment of Qatar's construction sector and are readily available to deliver high-quality services efficiently and effectively beyond client's expectations, regardless of magnitude or complexity.

NRB Consult also takes pride in employing seasoned professionals who are well versed in protecting the interests and entitlements of its client in a challenging market thus ensuring a reliable and impeccable service within the budget and specified time without compromising on the quality.

We bring in an assortment of professional services, such as;

***Contracts & Claims Management***  
***Forensic Planning, System Dynamics***  
***Commercial Management***  
***Dispute Resolution***  
***Project Management***  
***Building Automation Solution Partner***

Our services are structured to establish an open and collaborative environment between all key parties. These services can be provided individually or collectively at our client's direction, and will be tailored to fit the specific needs of our client's projects.

## Vision

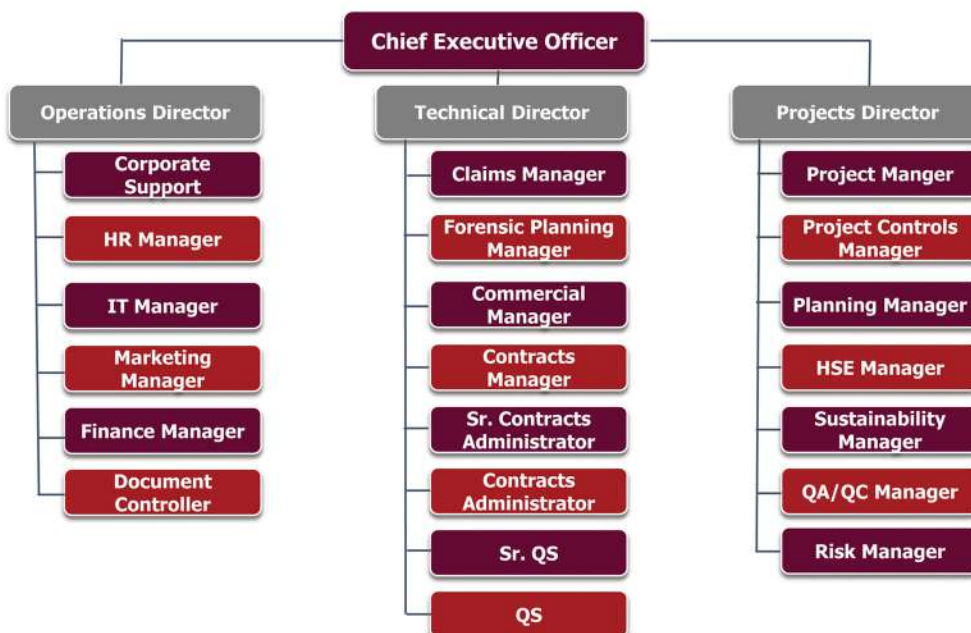

To be the top performing and most reliable construction support consultancy partner in the State of Qatar

## Mission

To continuously deliver and sustain the best, most comprehensive, consistent effective and highly professional construction support consultancy through its dedicated resources

- 4 Minimize client's budget
- 4 Meet client satisfaction
- 4 Protect client's interests and entitlements
- 4 Provide definite and measurable advantages
- 4 Facilitate identification of solutions minimizing the disruptive impacts on client's business
- 4 Deliver extensive regional experience together with analytical approach and comprehensive claims analysis skillset.
- 4 Deliver clear focus to achieve value.

## Organization Chart

## Contracts & Claims Management

NRB Consult's purpose of contract & claims management is to ensure that our clients fully meet their respective obligations as efficiently and effectively as possible, delivering the business and operational outputs required from the contract and providing value for money. Also to protect the rights of our clients ensuring required performance when circumstances change.

NRB Consult's multifaceted contract & claims management framework is on the activities to be undertaken during the operational phase of the contract to meet their contractual commitments to time, cost, quality and other agreed matters.

NRB Consult's effective approach to contract & claims management encompasses the following:

### Contract Administration

We assist clients in creating contracts and commercial project procedures and training staff in their use, in order to ensure that such matters are managed efficiently and that our client's contractual interests are protected through the life of the project including development of bespoke contract procedures and manuals to assist in the effective management of a project from inception to completion; Providing user friendly interpretation of contracts, both standard forms and one-off contracts, using flow diagrams and familiar processes to illustrate the mechanisms involved such as notice provisions, payment requirements, information transfer and time restrictions; record structuring; Providing key standard response documents which include all clauses, necessary references and terms to make them effective; Providing ongoing audits to ensure that administrative issues are being addressed; Drafting detailed contractual letters that is based on factual information to protect client's rights.

### Construction Claims and Dispute Management

We provide our clients with best value solutions in terms of preparing, appraising or defending claims for extensions of time, prolongation costs, disruption costs, acceleration costs or recovery of disputed variations. In order for a claim to succeed it must have contractual validity, together with the support of factual and accurate records, and clearly establish a cause and effect link.

### Strategy Reports, Peer reviews and Contractual advice

We offer contractual advice to clients in order to protect their commercial interests as an early intervention strategy to avoid and control disputes in construction sector before they escalate to arbitration or litigation.

Without clear professional advice, arbitration and litigation in the construction industry can be an expensive, time consuming and frustrating process. Therefore we will always try to help our clients resolve the dispute before it reaches this stage. An initial appraisal on the strengths and weaknesses of the case and the likely weight of supporting evidence together with analysis of the risks and the various courses of action open to the client (financial and non-financial), a strategic plan, explaining how to manage the case and the probability of achieving a settlement favorable to the client.

### Risk Register Management

We provide our clients with establishing an internal process from identification, mitigation, impact and outcome of the event which will be managed by the Event Record Sheet, Event Record dataset, Delay analysis table & contemporary records. This shall be reflected in the Risk Register as updates and managed by implementing control measures for inherent and residual risks.

## Forensic Planning & System Dynamics

From the commencement stage of any project, it is increasingly evident that construction and engineering operations are becoming more complex throughout all planning and execution stages. These complexities often cannot be considered at the commencement of a project, so it is therefore vital to review time-related risk throughout the progress of the works.

At NRB Consult, our teams of specialist consultants provide thorough and proactive advice throughout the life cycle of a project, as well as prospective and retrospective delay analysis to support contractual entitlement. Our consultants are familiar with all methods of delay analysis utilised in the construction industry and are consequently well placed to undertake a comprehensive assessment of delay, disruption, determination of culpability, critical delay and entitlement to prolongation costs. We provide our clients with various Delay Analysis techniques as many claims revolve around extensions to contract periods or delays in completion. By using the latest industry techniques and methods, it is easier to demonstrate how various events have impacted upon the projected programme of works, thereby allocating responsibility for the same. Further, we ensure that our advice is presented in a manner that is clear, accurate and easy to understand.

## Commercial Management

The success criteria of any project depends on the establishment and adoption of the most appropriate procurement route and contract form, pre - qualification criteria, and bid evaluation criteria. The procurement process that is to be managed is therefore intended to enable clients to strike the right balance between the often conflicting criteria of time, quality, price and function.

Collaborating with NRB Consult allows our clients to manage their projects efficiently whilst we ensure they obtain the best value from their investment.

## Dispute Resolution

On even the most well managed projects disputes arise between the parties to the contract. NRB Consult offers support in dispute management and resolution, as well as assisting clients in the assessment of risk and avoidance of disputes.

Our experienced team analyze individual dispute situations and provide the objective and technical assessment needed to reach resolution. We have the expertise and services to provide support to our clients in every phase of the dispute resolution process.

## Project Management

Effective Project Management is critical in ensuring that a project is completed to on time, within budget and to the required quality standards. Our project management skills have enabled us to create a proven track record of delivering projects beyond the client's expectations, regardless of magnitude or complexity.

Our first step is a thorough review of the client's requirements, in order to set the project's parameters and ensure it will fulfill their business objectives. NRB experts pro-actively manage the project through all stages of strategy, design, procurement, construction and commissioning to a final handover of the project.
